

S Massoud [Mesut] Sallah | 2021 | Application
for Master of Architecture

Summer 2014
Attended GSD Career Discovery
First Architecture Studio

2012
Connecticut College
Studio Art

2009
Left Afghanistan for schooling
abroad.
Attend Wasatch Academy in
Utah on a full scholarship.

Fall 2014
Declared major in Architectural Studies

2016-2019
Professional Model Making

2019-2021
Professional Architectural Designer

O1 ART WORK

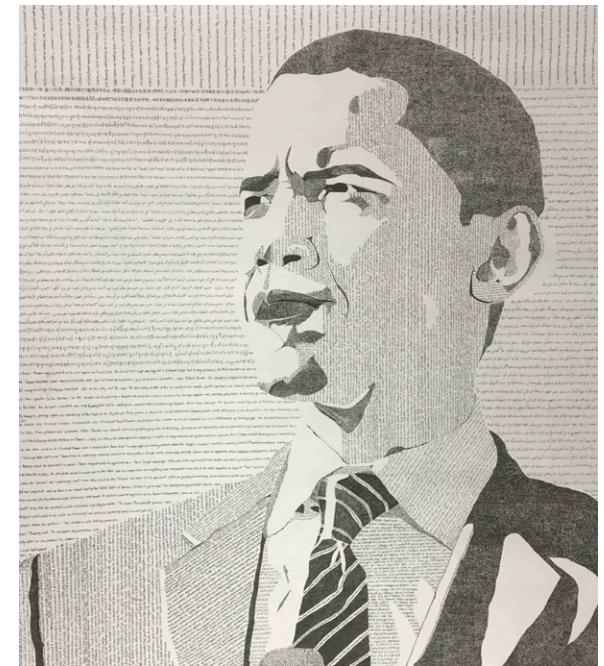

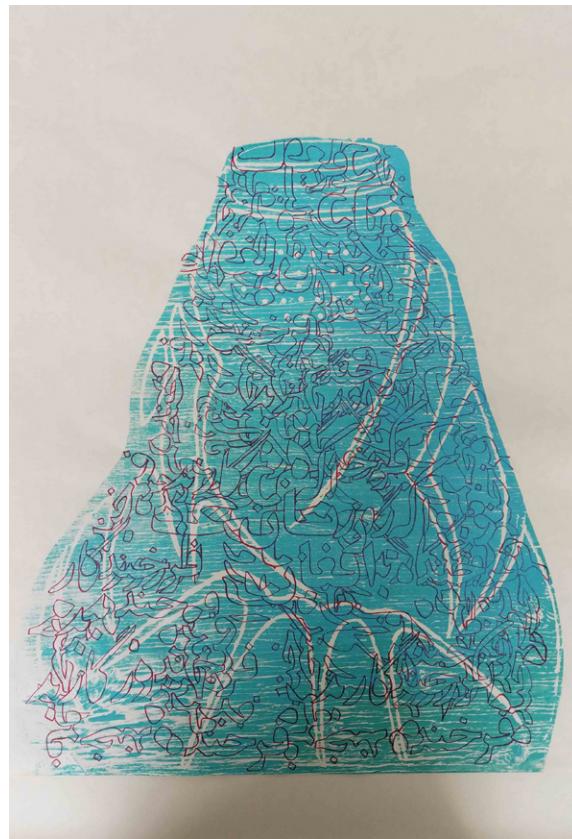

INDEPENDENT AND ACADEMIC | INDIVIDUAL | 2012 - 2016

When I arrived at Connecticut College as freshman, Studio Art was the focus of my academic interests. In between my freshman and sophomore years, I took many studio art classes with the goal to contribute in resurgence of Afghan contemporary art. Throughout my artwork, I explored cross cultural identities and the politics of Afghanistan.

a. #IAMFARKHUNDA

Ink, Printmaking 40" x 60"

In memory of Farkhunda, an Afghan girl who was publicly beaten to death by over 200 men. This piece portrays her face covered by chadare (burqa) with written calligraphic words marking her name and calling for justice and the rights of Afghan women.

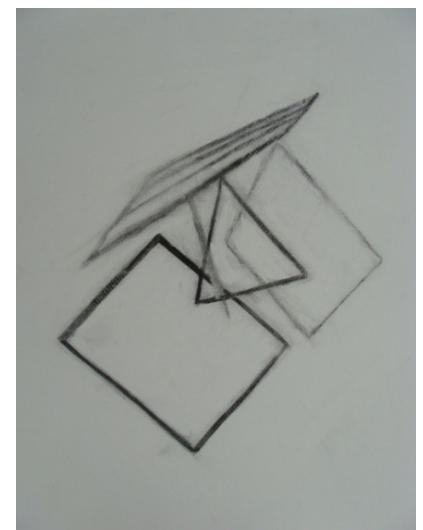

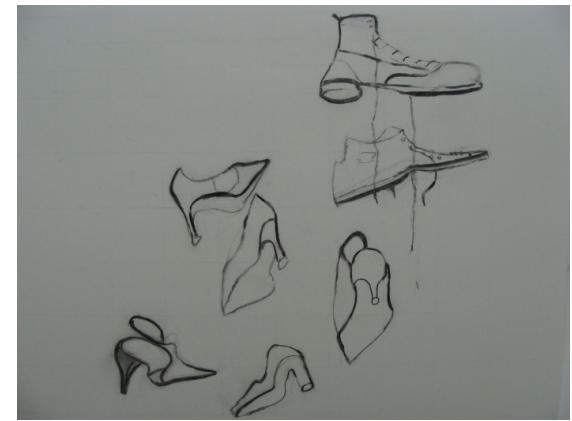

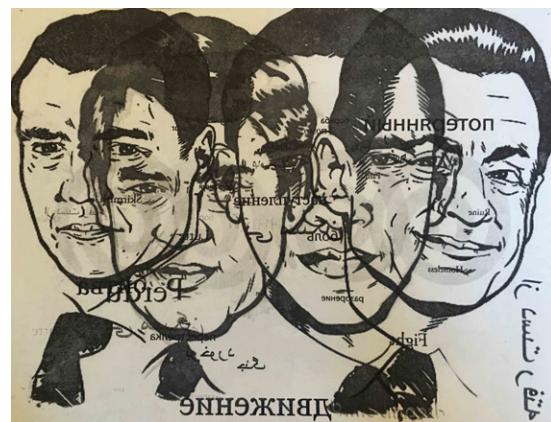

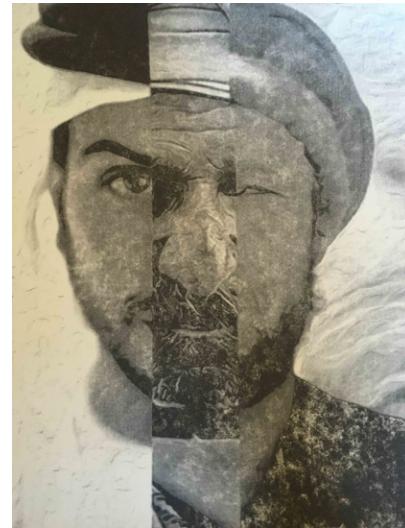

b. OBAMA

Hand-drawn portrait of Obama 36" x 48"

Hand-written in 10 different languages, comprised of sentences from various articles about Obama winning the election in 2012.

c. Others

Ink, Printmaking, Charcoal

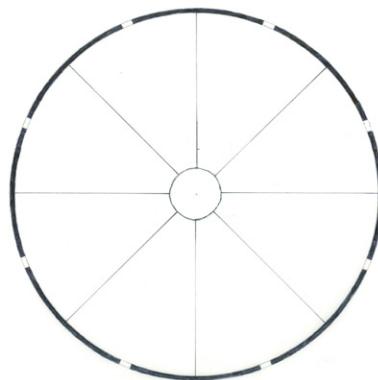

O2 GSD CAREER DISCOVERY

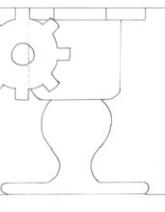

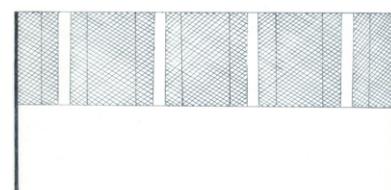

ACADEMIC | INDIVIDUAL | 2014

In the summer of 2014, right after my sophomore year, I attended an intensive career discovery program at Harvard Graduate school of Design focusing in studio work in Architecture. This was my first architecture studio. At the end of this six-week intensive program, I was interested in pursuing a career in Architecture.

“Tools of Seeing” was a project for my design studio. The prompt was to invent a public site and architecture that represents the Film Archive and Cinema as an open cultural center and landscape. Students had to pick either a protocinematic device or a director/movie from a given list. I chose Horner’s Zoetrope.

O3 LANDSCAPE STUDIO

ACADEMIC | INDIVIDUAL | 2014

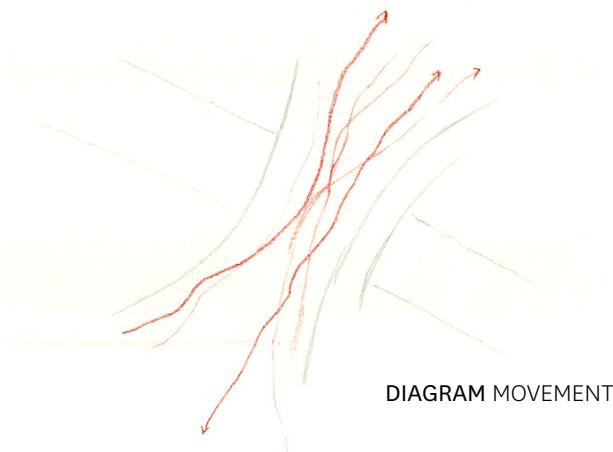

In the Fall semester of my junior year, I declared Architectural Studies as my major. I quickly sat out with to determine what classes might serve me best in preparation for graduate school in Architecture.

For my final Landscape Studio project at Connecticut College, we were asked to pick a site on our campus and propose a change. I chose the bridge that connects the two sides of the campus over a very busy and dangerous road.

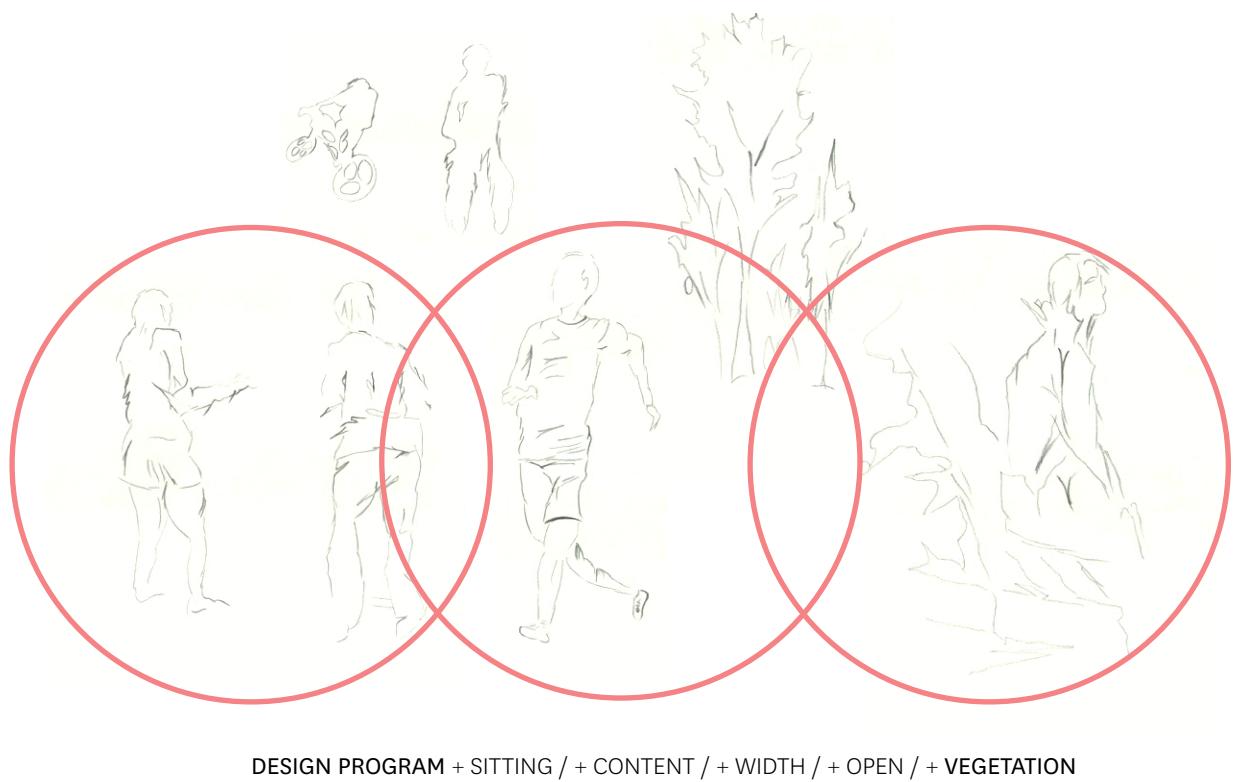

Twelve years ago, I left home for Utah. Two locations on opposite ends of the world with similar landscape, yet different on every level: both surrounded by mountains in a similar geography, one's filled with slums and poverty with the other filled with ski resorts, and wealth. It was 'bridges' that allowed me to cross the chasms that once kept me from the outside world. Bridges have provided me passages to escape the Taliban's obstacles. I arrived to Connecticut College through series of bridges - metaphoric and physical - and this place became a home for me.

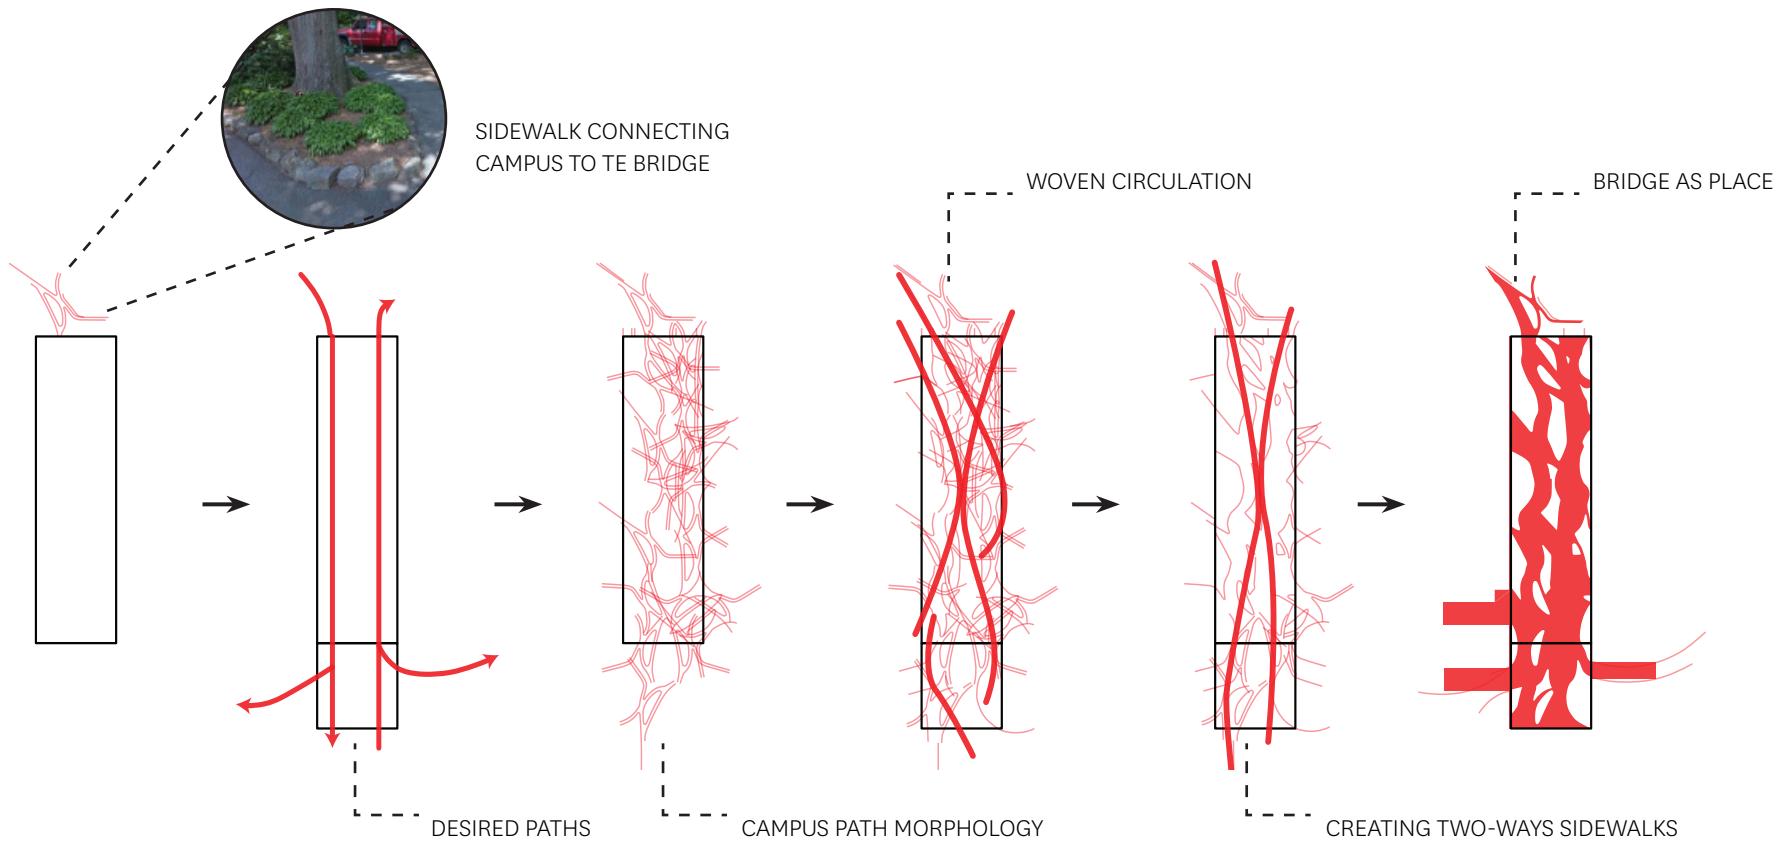

The college's idyllic hilltop overlooks the Long Island Sound, the Athletic Center overlooks the Thames River. But the Athletic Center is divided from the main campus by Interstate 95. The existing pedestrian overpass is not accessible for those individuals who might have a physical disability and the steel maze around the bridge gives the impression of walking through a prison column.

For that reason, I believe that there is a need for a new pedestrian bridge, crossing Mohegan Road, that would provide an accessible landscape integrated with the campus open space network, linking the two sides. In addition to improving connectivity between east and central campus, the bridge will act as a symbol of the ways Connecticut College teaches us to bridge differences and create vital connections.

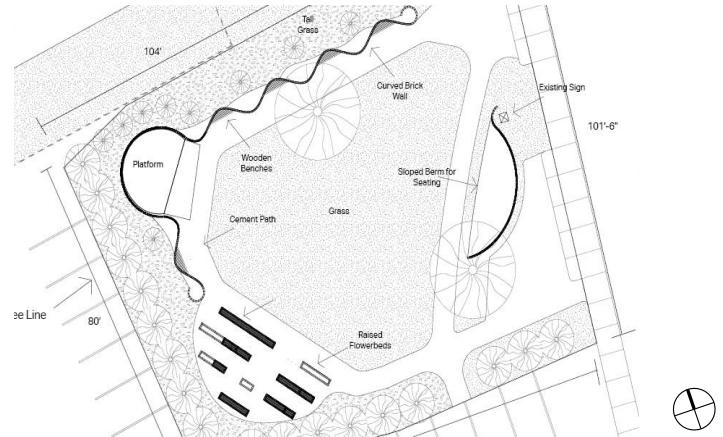

CONCEPT SECTION

O4 HODGES SQUARE PARK

ACADEMIC | GROUP PROJECT | 2015

In the spring of 2015, Connecticut College launched a “design-build” course that teamed architectural studies and psychology students with the Hodges Square Village Association to collaborate on the design and construction of a park in New London, Connecticut.

As psychology and architecture students, we worked together to create and distribute a survey for the Hodges Square community, analyze the survey data, and use that data as parameters for the park design.

FINAL DESIGN MASTER PLAN

COLLAGE PERSPECTIVE

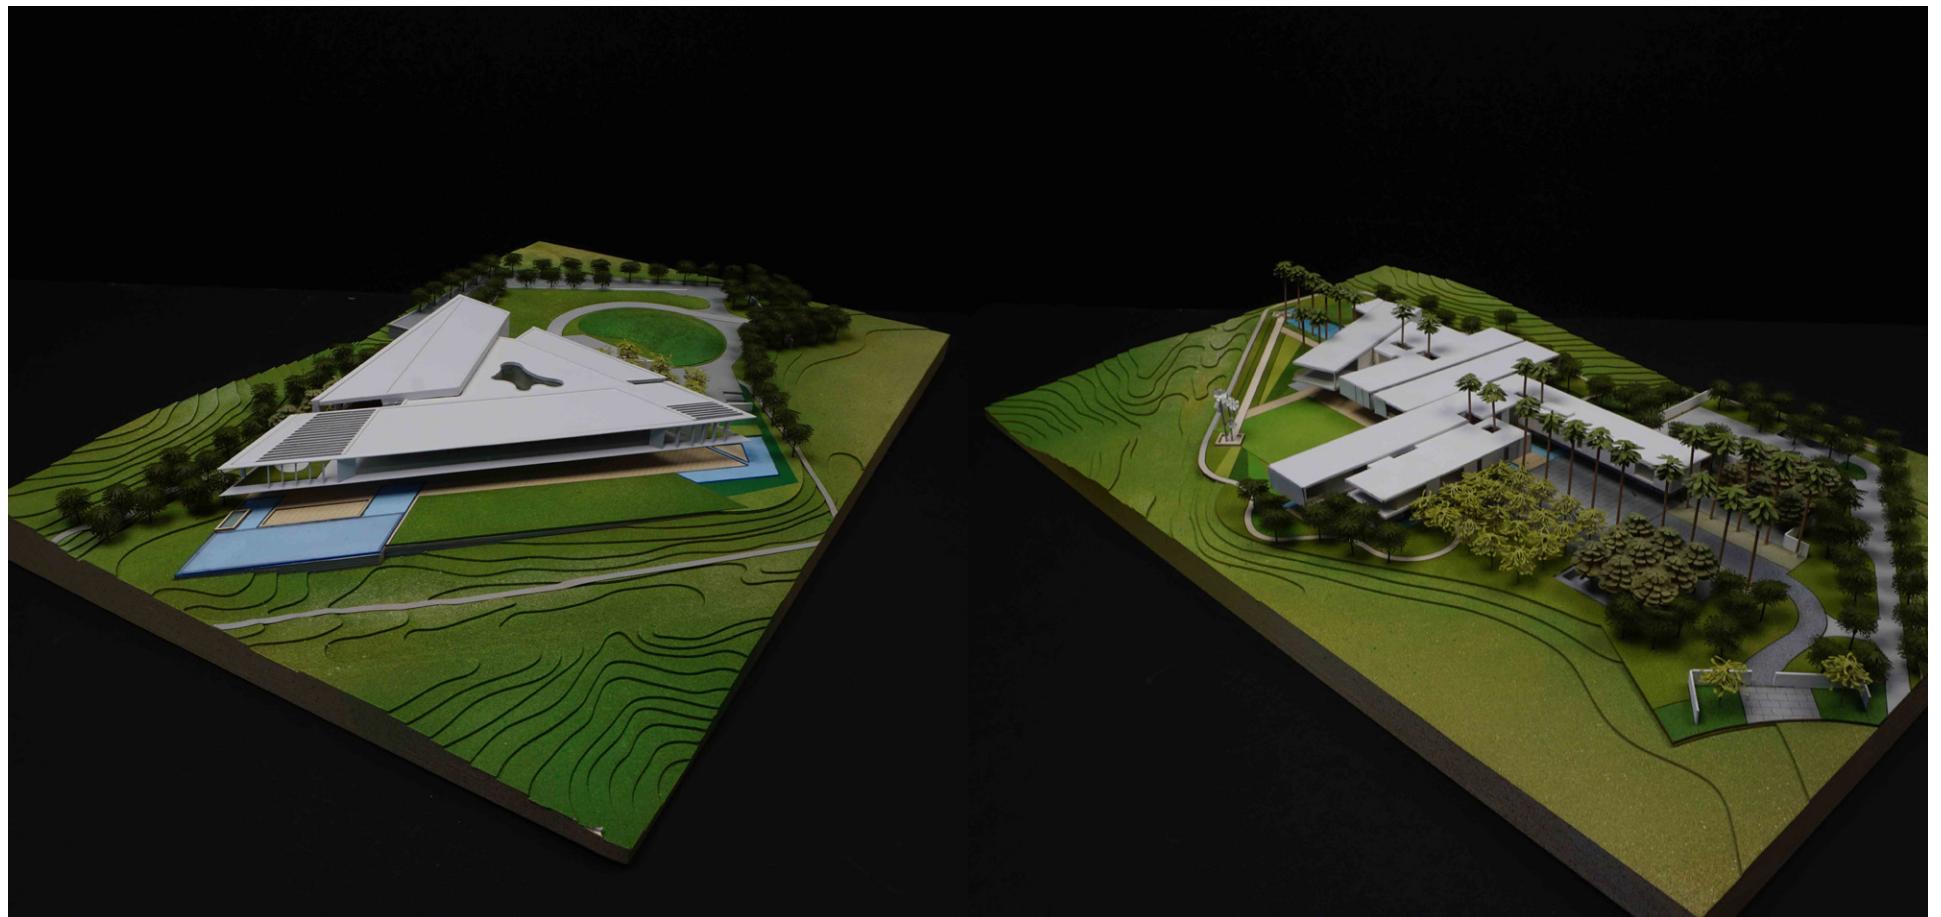

PHASE I Completion of three seating bays of Phase 1, featuring curved brick walls and ipe boards. Phase 1 was completed with the College funding, material and equipment donations, as well as a Kickstarter campaign that raised \$2,495.

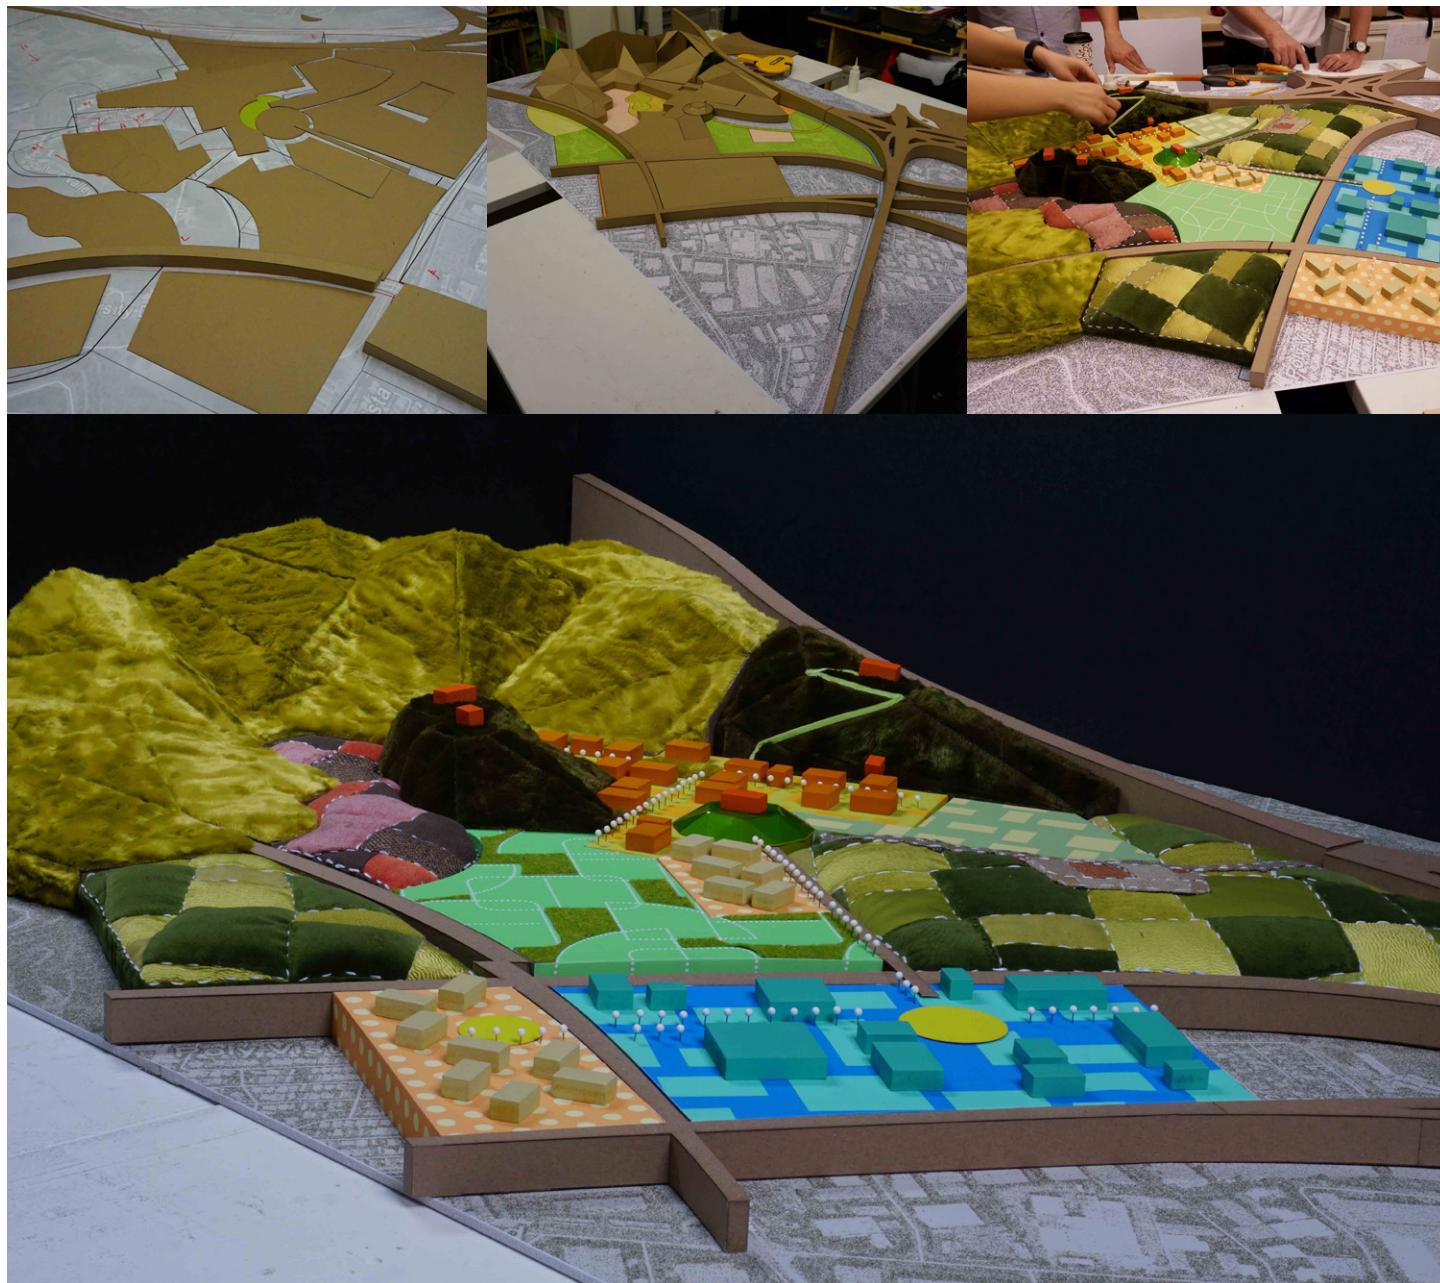

O5 MODEL MAKING

PROFESSIONAL | RIOS Studio | 2016 - 2019

With no professional academic background in architecture, I started my journey in the model shop right after graduation. During my time at RIOS Studios, I worked on over 50 physical models with a team of three people, from simple massing models to more highly detailed models. In addition, I developed strong 3D digital modeling skills using Rhinoceros, 3D printing and laser cutting to deliver complex geometry faster.

LAS VEGAS RESIDENCE, OPTION 1 AND 2, 1/32"=1' - 0" | 3D PRINTS, LASER CUTTING, PAPER, WOOD

CAL POLY POMONA CAMPUS, MASTER PLAN CONCEPTUAL MODEL, 1/32"=1' - 0" | TEXTILE FABRIC, PAPER, PAINTED WOOD

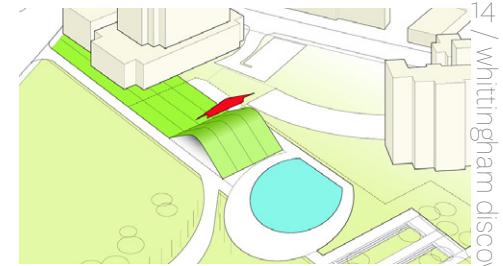

O6 WHITTINGHAM DISCOVERY CENTER

PROFESSIONAL | JCJ Architecture | 2019

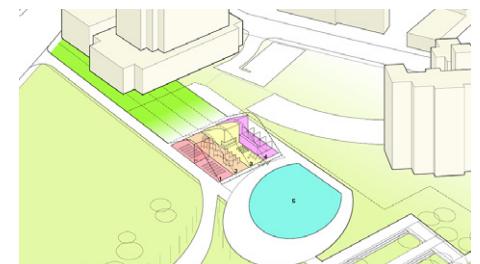

LORENZO MATTII [DESIGN PRINCIPAL] | MESUT SALLAH [DESIGNER]

A conceptual design to rehabilitate and energize the 28-acres of blighted parkland in the heart of downtown Stamford. Designed to function as both an integral part of the landscape and a dynamic object within an urban space, the Discovery Center will contribute to the ecological diversity and restoration of an important public resource. In addition to creating a place of enduring appeal that engages and holds the eye of the observer, the building would include facilities to interactive exhibits, functional classrooms/labs, support areas for an adjacent ice skating rink, carry out cafe, office and support spaces for employees.

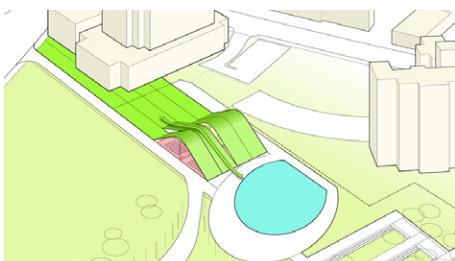

In this project, I was responsible for the overall 3D modeling, creating diagrammatic axons and all the rendering views. The project was awarded the AIA Connecticut 2019 in the Unbuilt Category.

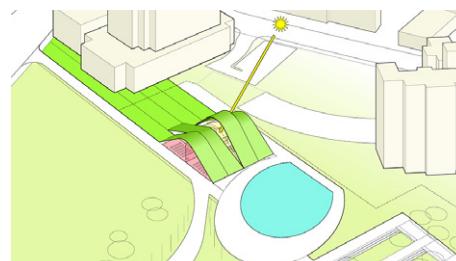

PEAKS - The slopes designed to be an extension of the landscape.

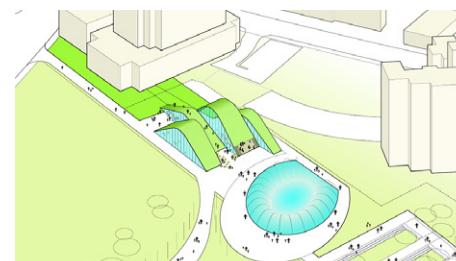

The lifted landscape open up for the possibility of programming the space underneath.

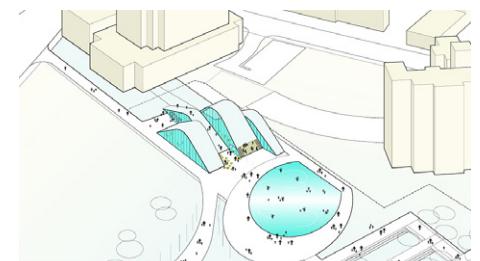

Lowering of the hills allowing visitors to climb onto the roof.

Raising an adjacent hill allows daylight into the building.

SUMMER - the rooftscape is a green continuum of the surrounding natural landscape.

WINTER - the fountain is converted to a skating rink. The Discovery Center will offer visitors an unusual destination - sledding, recreation and dwelling.

O7 TOKYO BAY | INTEGRATED RESORT

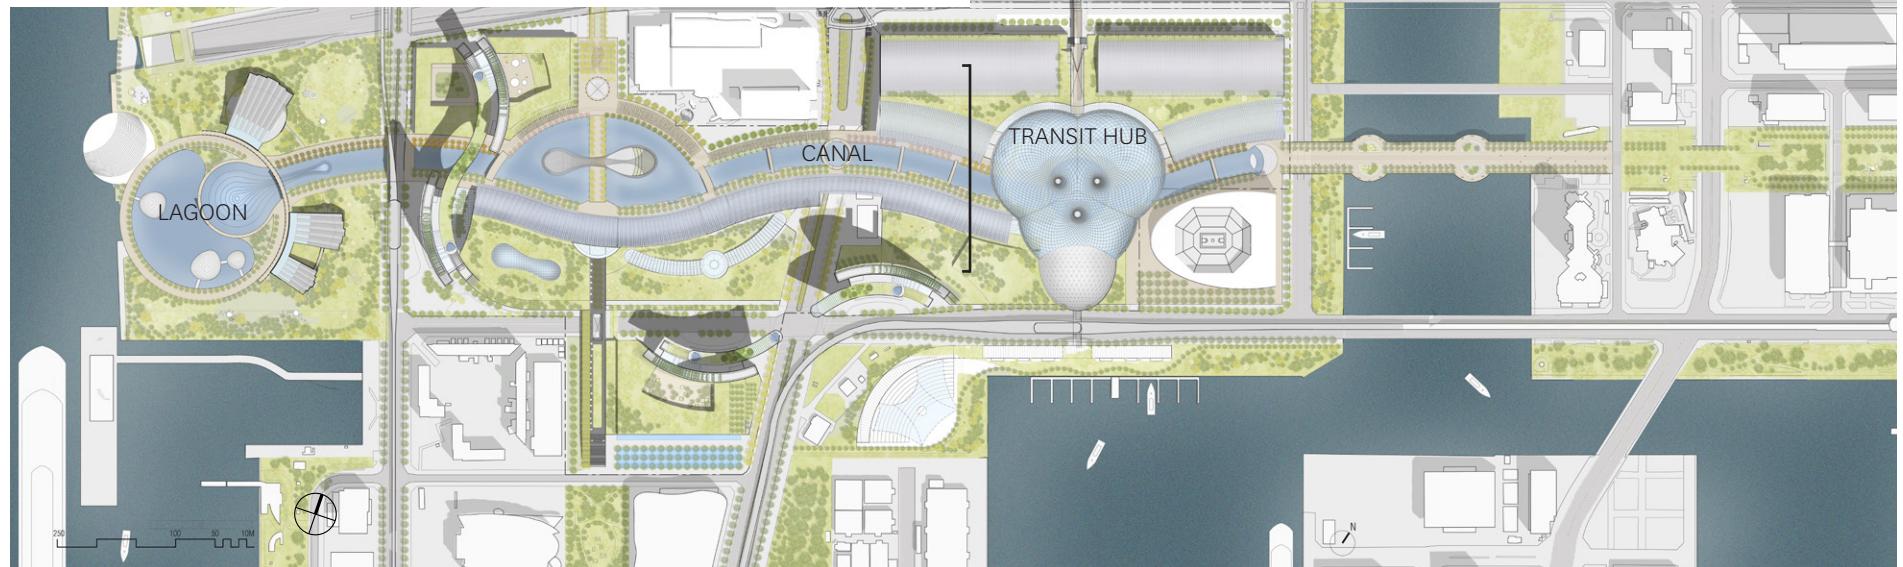

PROFESSIONAL | COMPETITION | SAFDIE ARCHITECTS | 2021

MOSHE SAFDIE AND JARON LUBIN [DESIGN PRINCIPALS] | SEUNG OH [ASSOCIATE DESIGN PRINCIPAL] | SEUNG KIN [SENIOR DESIGNER] | NICHOLAS FRAYNE, CLAYTON STRANGE, DEEKSHA KARLA, SIQI TAN, MEGAN TAN, ZACH LENZA AND MESUT SALLAH [DESIGNERS]

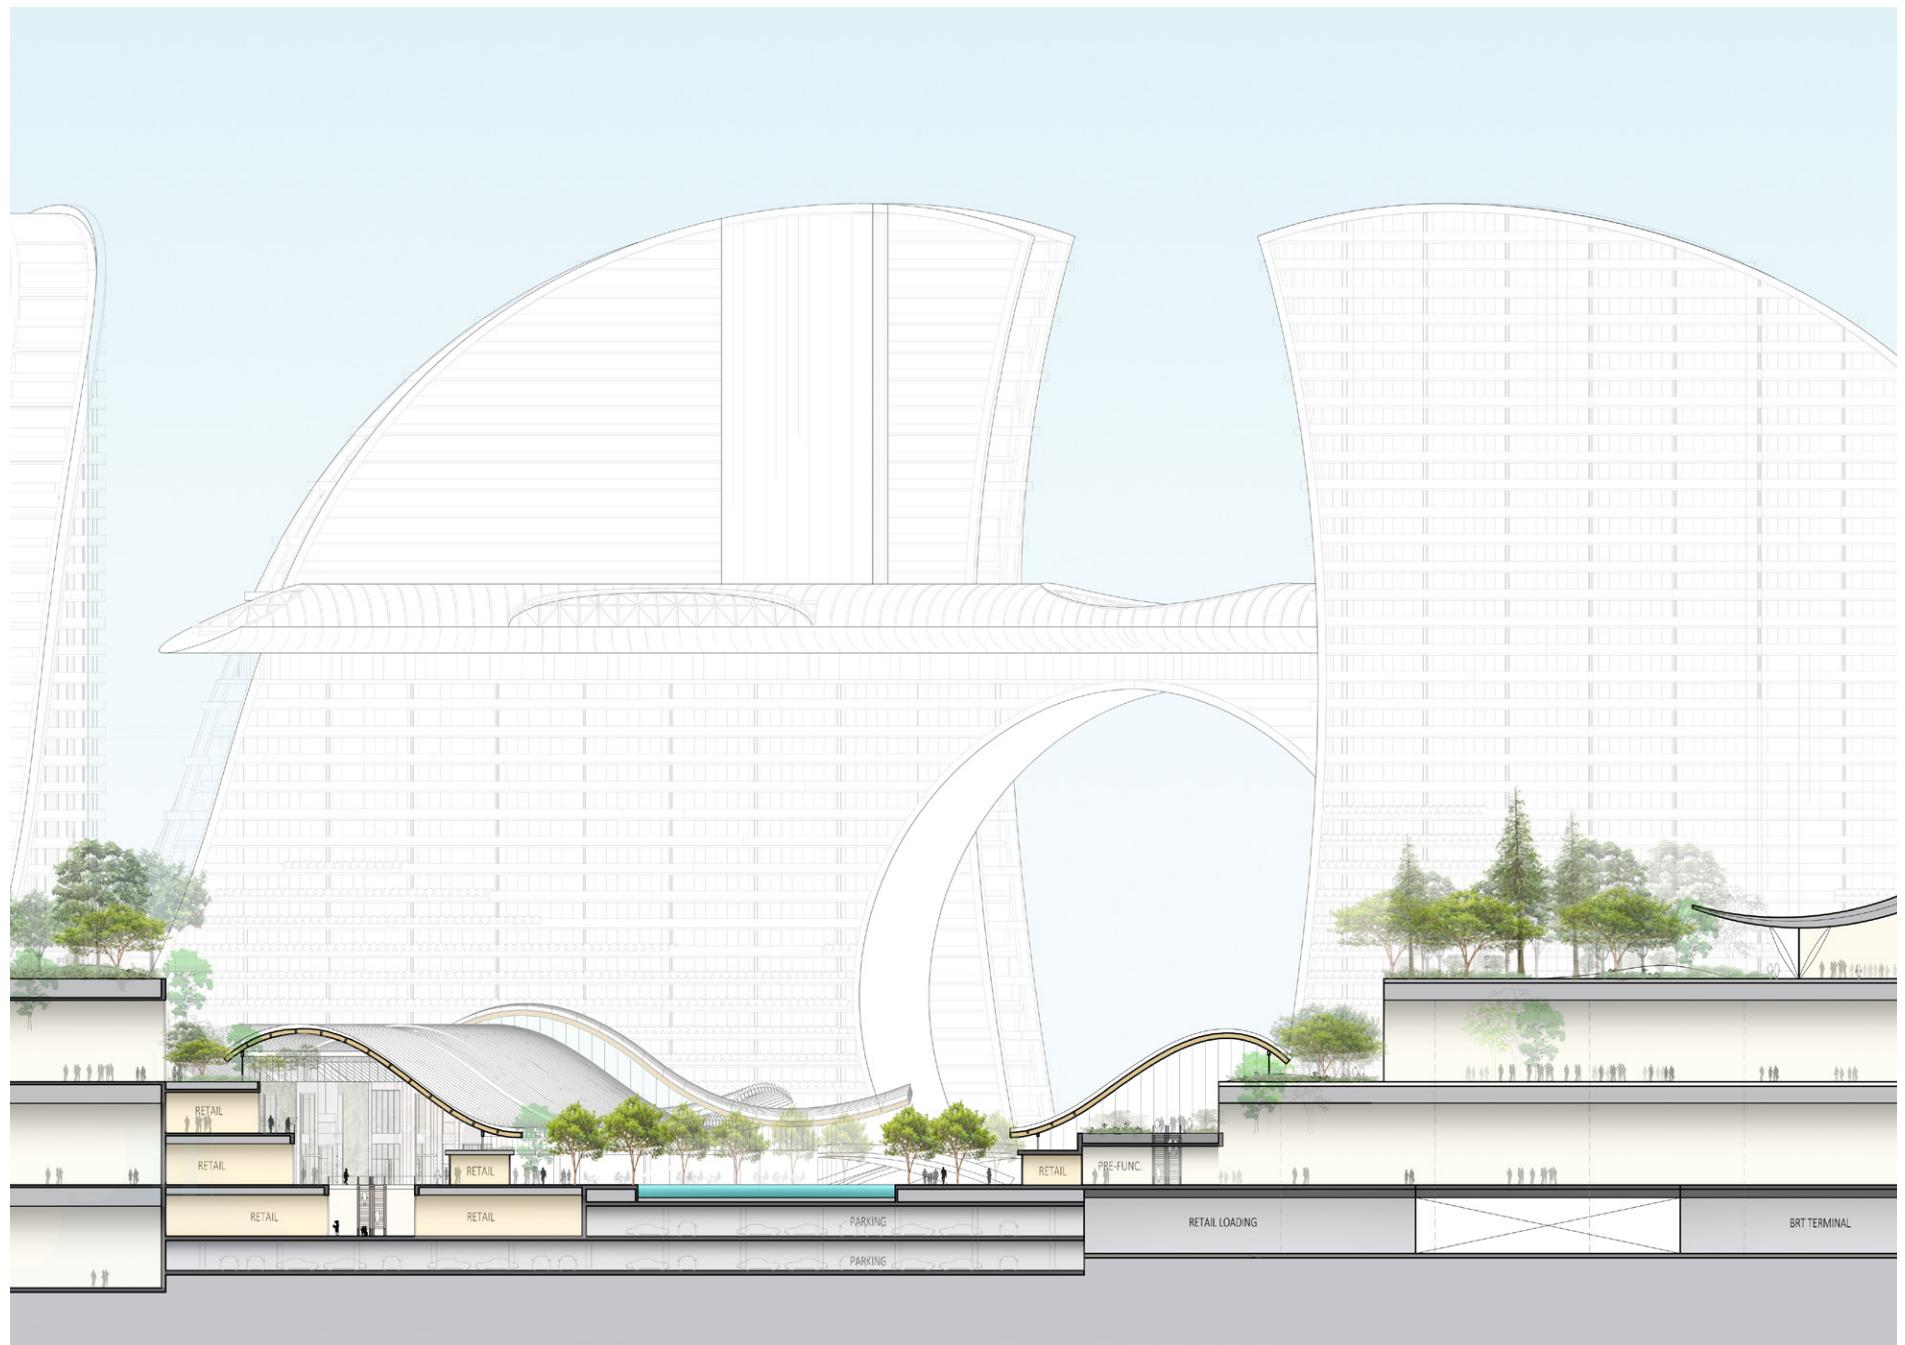

A design competition to create a new district hub in Tokyo with the aim that is characteristics of Tokyo and aspires to be the city of the future. Moshe Safdie's master plan vision for the site focuses on urban relations and connects the site with other planned developments in Tokyo to create a loop of activities defining the Tokyo Inner Harbor.

The master plan includes rehabilitated green harbors, canal, retail spine, hotels and casino, cultural venue, transit hub, sky gardens and cultural and entertainment lagoon. All parts of the urban fabric are given strong identities, relating to each other and resulting in a colorful, resilient and vibrant new district.

My responsibility for this project included updating Rhino 3D model on a daily basis, drawing sections, modeling complex roof geometries and developing various Grasshopper scripts for efficient and fast modeling.

MASTER PLAN - Drawn by Clayton Strange and Illustrated by Deeksha Karla.

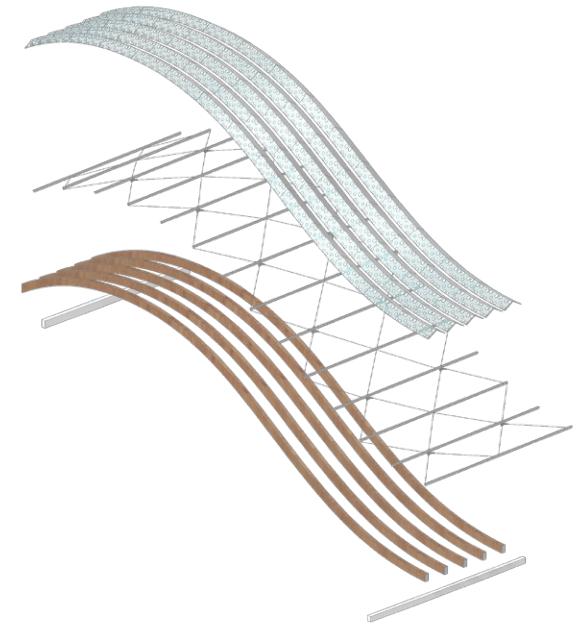

RETAIL AND CANAL SECTION - Demonstrating the concept of Indoor and Outdoor retail experienced alongside the canal. The greenery bringing sustainable value to the buildings and pedestrian space.

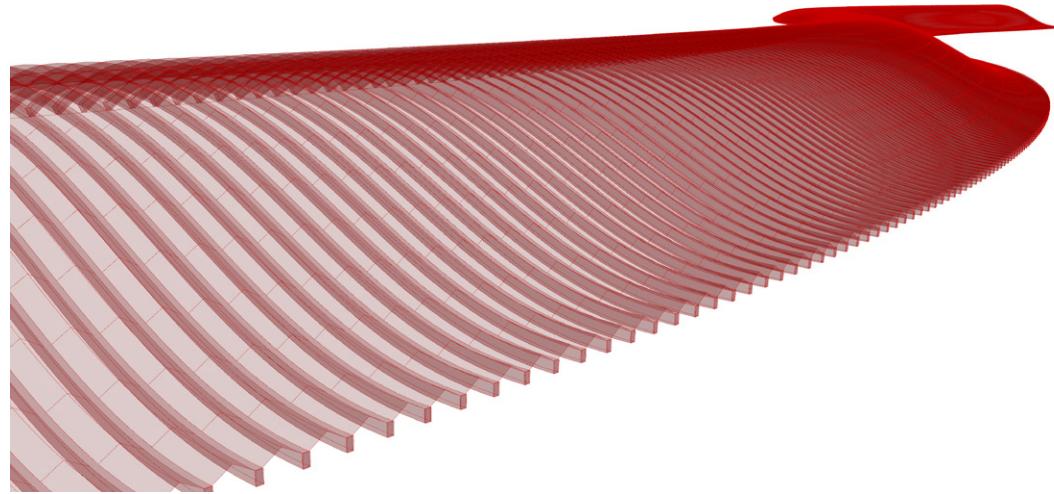

GLAZING WITH PATTERNED BIPV ON SOUTH-FACING PANELS

SECONDARY PURLIN AND CROSS BRACING

PRIMARY TIMBER STRUCTURE 250 X 600 MM @ 1.5 M CENTERS

RETAIL ROOF AXON an expression of Japanese craft. Its distinctive presence along the canal spine, creates indoor and outdoor retail spaces.

Parametric roof using Grasshopper. The script controls the overall form of the roof. Different parameters are given to easily adjust the overall shape, length and width, and the sizes of timber structures. Full script is available on my GitHub page | <https://github.com/mesutsala>

RENDERING OF TOKYO INTEGRATED RESORT (COURTESY SAFDIE ARCHITECTS)

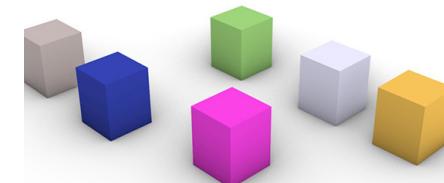

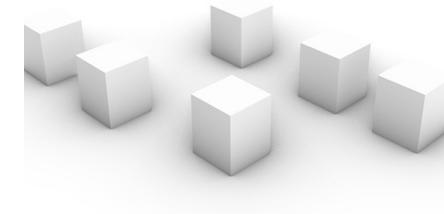

O8 SCRIPTING

INDEPENDENT | INDIVIDUAL | 2020 - 2021

I develop plug-ins to automate repetitive tasks in Rhinoceros. The following python script creates material for every Rhino layers or selected layers. It can save minutes or hours when we need to assign materials name to objects in Rhino for visualization.

```

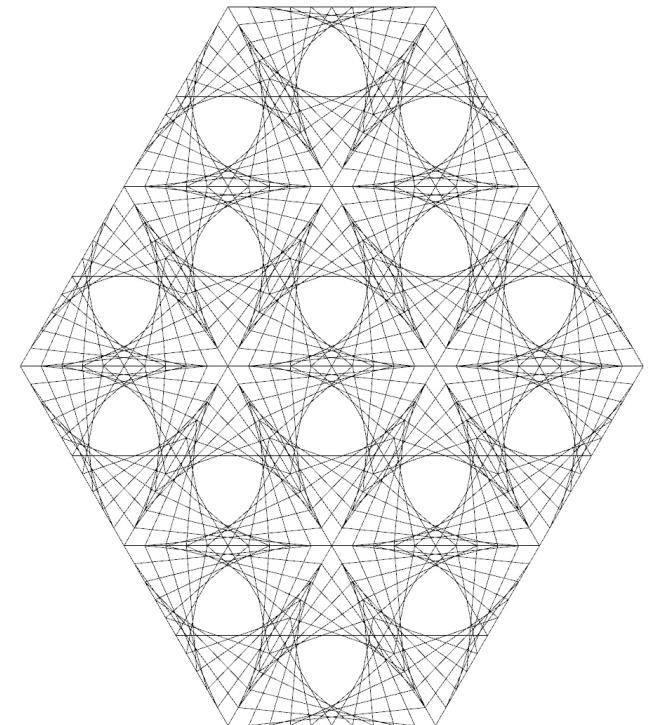

0   import rhinoscriptsyntax as rs
1   import random
2
3   #author Mesut Sala
4
5   def randomColor():
6       R = random.randint(0, 255)
7       G = random.randint(0, 255)
8       B = random.randint(0, 255)
9       return R, G, B
10
11  def MaterialNameByLayer():
12
13      layersName = rs.LayerNames()
14      options = ('All Layers', 'Selected Layers')
15
16      if options:
17          results = rs.ListBox(options, "Pick an option: Mesut")
18
19      if results is None: return
20
21      elif results == "All Layers":
22          for i in layersName:
23              if i:
24                  index = rs.LayerMaterialIndex(i)
25                  if index == -1:
26                      index = rs.AddMaterialToLayer(i)
27                      rs.MaterialName(index, i)
28                      materialColor = rs.MaterialColor(index, randomColor
())
29
30
31      else:
32          selectedLayers = rs.GetLayers("Select the layers you want
to add materials:", False)
33          for i in selectedLayers:
34              if i:
35                  index = rs.LayerMaterialIndex(i)
36                  if index >= -1:
37                      index = rs.AddMaterialToLayer(i)
38                      rs.MaterialName(index, i)
39                      materialColor = rs.MaterialColor(index, randomColor
())
40
41
42
43  if __name__=="__main__":
44      MaterialNameByLayer()
```

In addition to creating plug-ins, I write codes in Python to create complex patterns. In this example, I took a simple rectangle geometry using the bone structures as input to create more complex pattern. We can repeatedly run the same code to create more complexity. The full script is available on my GitHub page: <https://github.com/mesutsala>

```

0  import rhinoscriptsyntax as rs
